SANITARY DETERGENTS

sanawash.com

Sana Group produces all kinds of ordinary, household and industrial detergents, which is considered a popular brand in the Middle East. Sana Group tries to compete with other manufacturers at the international level in terms of product quality, and for this, it tries to provide the best materials to its customers.

SANA

What makes the use of a detergent even more prominent is its power in cleaning surfaces. These surfaces can include metal and plastic surfaces, wooden surfaces, fiberglass or all kinds of alloys and fabrics.

detergents

These materials are the most common cleaning compounds, which have different types, including washing machine and hand washing powder, machine and hand washing liquid, dishwashing liquid and toilet liquid.

soap

Soap is a cleaning agent containing a salt of fatty acids that is made using an alkaline compound such as sodium hydroxide. The presence of fat-vegetable fat-animal compounds is necessary to prepare all kinds of soap.

Bleach

Bleach is divided into two categories: bleach containing chlorine and bleach containing oxygen.

Chlorine bleaches are very strong and effectively whiten surfaces that are suitable for all types of fabrics.

Oxygen-containing bleaches are used for all surfaces and also for cleaning all kinds of fabrics, they have a milder chemical nature and do not damage the texture of the fabric.

The logo for SANA, featuring a stylized white flame or leaf shape with a small star at the top, set against a blue circular background with a yellow border. The word "SANA" is written in white capital letters below the graphic.

SANA

Laundry booster

These materials are compounds that are added as additives to special laundry detergents in order to increase the washing performance.

stain remover

Stain removers are capable of removing all types of stains from surfaces. Detergent raw materials, alcoholic compounds, minerals and some enzymes are used for the synthesis of these types of detergents

optical brightener

Adding these types of detergents to the original solutions makes the surfaces whiter and brighter. These solutions absorb the ultraviolet light of the sun and emit blue lights like fluorescent lamps

SANA

Sana Group, with its skilled professionals and active production line, tries to provide products in sanitary packaging to customers.
